

I know that this is late, but I am a truck driver and did not have any e-mail capabilities, til today. I love the new traffic and weather channels on XM. They have helped me get around a couple of problems in LA. Which means that my load delivered on time. I feel that XM should be able to have this type of programing. It is very valueable in the trucking industry. On a personal note, I choose Xm over am-fm because I could not pick up radio stations out west. If I could get a station it normally was not my type of listening. I own 2 XM's and have several family members and friends that own them also. It sure is a shame that the nab has to stir the pot again. But, that is fine with me, I'll just listen to my XM more and not am-fm or tv. I support the things I like. I know that I am only one person but, if 9 million one persons get together maybe the main stream media will get a clue someday, DON'T tell us what we can see or hear. I served in the ARMY proudly for my right and others right to make choices. Thank you for listening to OUR(XM NATION) voice.
